MEMSYST — ASSOCIATION PUBLIC FRONTEND DESIGN REFERENCE PROMPT
Pixel-Accurate Association Template Recreation Specification
You are designing the MEMSYST Association Public Frontend Template.
CRITICAL REQUIREMENT:
The attached reference image is NOT inspiration.
It is the PRIMARY UI/UX REFERENCE.
Your task is to analyze the attached design carefully and recreate the SAME design language, layout structure, spacing system, visual hierarchy, mobile responsiveness, navigation behavior, card composition, and interaction flow.
DO NOT redesign the interface.
DO NOT introduce a different layout philosophy.
DO NOT replace the design system with generic SaaS templates.
DO NOT use dashboard-style admin UI patterns.
The goal is:
A refined, production-grade implementation of the attached design.
The final frontend should feel:

- visually identical
- structurally identical
- interactionally identical
- mobile-first
- modernized without changing layout DNA
- scalable for multi-tenant association branding

---

1. PROJECT CONTEXT
Platform:
MEMSYST — Multi-Tenant Association Management Platform
Frontend Scope:
Association Public-Facing Website Template
This is NOT the admin dashboard.
This template represents:

- association landing pages
- public member pages
- marketplace pages
- training pages
- branch pages
- regional pages
- vendor pages
- contact pages
- onboarding pages

Each association account uses this template dynamically.

---

2. CORE DESIGN REQUIREMENT

MANDATORY

Developer MUST:

1. Analyze attached reference image carefully
2. Replicate:
    - layout system
    - mobile responsiveness
    - card positioning
    - section spacing
    - navigation placement
    - footer behavior
    - content hierarchy
    - typography scale
    - page flow
    - interaction patterns
3. Preserve the overall visual identity
4. Use clean production-quality implementation
5. Modernize subtly WITHOUT changing structure

---

3. GLOBAL DESIGN LANGUAGE

The UI style in the attached reference uses:

Minimal

Clean

Card-based

High whitespace

Mobile-first

Association-brand-driven

Soft-shadow layout

Modern directory-style UX

The implementation MUST preserve this exact feel.

---

4. COLOR SYSTEM

The attached design heavily uses:

White background

Soft gray sections

Bright pink primary accent

Dark text

Muted secondary text

Primary Brand Accent:

#ff0f7b (or closest refined equivalent)

Rules:

- Pink is the primary CTA color
- Pink used in footer bars
- Pink used in headers/buttons/highlights
- Backgrounds remain light and clean
- Avoid dark-mode styling
- Avoid glassmorphism
- Avoid neon effects

---

5. TYPOGRAPHY REQUIREMENTS

Use:

Modern clean sans-serif

Recommended:

- Play
- Manrope
- Plus Jakarta Sans

Typography behavior should match reference:

Element	Style
Titles	Medium-bold
Body	Clean/light
Navigation	Compact
Cards	Minimal text density
Footer	Simple/high contrast

Avoid oversized typography.

---

6. LAYOUT ARCHITECTURE

The attached design is strongly:

mobile-first stacked layout

with desktop expansion.

Frontend MUST preserve:

- stacked mobile sections
- narrow content containers
- centered content alignment
- card-based grouping
- modular sections
- strong vertical rhythm

---

7. GLOBAL PAGE STRUCTURE

All pages MUST follow:

Sticky Header

→ Hero / Intro

→ Content Sections
→ Card Grids
→ CTA Sections
→ Footer
Spacing should closely resemble attached design.

---

8. HEADER DESIGN

The reference design uses:

- compact header
- clean horizontal navigation
- minimal clutter
- logo left
- nav center/right
- CTA actions visible

Required behavior:

- sticky on scroll
- mobile collapse menu
- smooth transitions
- active nav state
- responsive behavior

Navigation examples:

- Home
- About
- Members
- Marketplace
- Training
- Contact
- Login
- Register

---

9. HERO SECTION DESIGN

The hero area MUST remain visually light.

Characteristics from reference:

- centered messaging
- clean whitespace
- simple CTA
- optional image/banner
- not oversized
- minimal marketing clutter

Avoid:

- giant corporate SaaS hero sections

- excessive gradients
- animated backgrounds

---

10. CARD DESIGN SYSTEM

The entire frontend heavily depends on cards.
All cards MUST follow the attached visual style.

MARKETPLACE POST CARD

Reference behavior:

- compact grid card
- image-first layout
- minimal text density
- action buttons at bottom
- strong spacing consistency

Card structure:
Image
→ Category
→ Title
→ Price
→ Location
→ Actions
Actions:

- WhatsApp
- Call
- View

MEMBER CARD

Reference behavior:

- clean profile summary
- verification emphasis
- image + details
- lightweight information density

Structure:
Photo
→ Business Name
→ Category
→ Region/Branch
→ Contact
→ CTA

ADS CARD

Must follow:

- clean banner design
- image-first composition
- minimal text
- CTA-driven
- carousel compatible

---

11. PAGE REQUIREMENTS

HOME PAGE

Must include:

- Hero section
- Association intro
- Marketplace preview
- Members preview
- Featured sections
- CTA banner
- Footer

Use same section ordering feel as reference.

ABOUT PAGE

Layout from reference:

- text-heavy informational structure
- image/content pairing
- vertical content blocks
- clean readability

MEMBERS PAGE

Must include:

- searchable member grid
- filter section
- card listing
- branch/region filters
- responsive grid

MARKETPLACE PAGE

Must include:

- listing cards
- categories
- featured ads
- pagination/infinite scroll
- filter sidebar/topbar

TRAINING PAGE

Must follow reference structure:

- course cards
- section grouping
- lightweight content density
- registration CTA

CONTACT PAGE

Reference strongly indicates:

- split contact layout
- form + contact info
- clean spacing
- embedded map support

BRANCH PAGE

Must include:

- branch hero
- branch contact
- gallery
- regional relation
- members under branch

REGIONAL PAGE

Must include:

- region intro
- regional managers
- branches
- members
- marketplace listings

VENDOR PAGE

Must visually align with member pages but optimized for:

- marketplace visibility
- product previews
- ads integration

APPRENTICE PAGE

Must maintain:

- lightweight card listing
- mentor/master relation

- simple verification display

---

12. FOOTER DESIGN

The reference footer is:

- bold pink
- high contrast
- compact
- informational
- mobile-friendly

Must include:

- quick links
- contact info
- social links
- copyright
- association branding

---

13. RESPONSIVE BEHAVIOR

CRITICAL REQUIREMENT.

The reference image is heavily mobile-oriented.

Frontend MUST:

- prioritize mobile rendering first
- stack sections naturally
- preserve card spacing
- maintain identical mobile hierarchy
- use responsive grids
- avoid desktop-first layouts

Breakpoints:

Device	Behavior
Mobile	Single-column
Tablet	Two-column hybrid
Desktop	Expanded multi-grid

---

14. ANIMATION RULES

Animations should be:

Subtle

Professional

Fast

Minimal

Allowed:

- hover lift

- fade transitions
- smooth dropdowns
- carousel transitions
- soft card hover

Avoid:

- heavy motion
- parallax overload
- exaggerated scaling

---

15. COMPONENT REQUIREMENTS

Frontend should be componentized.

Recommended architecture:

Header
Footer
HeroSection
CardGrid
MarketplaceCard
MemberCard
AdsCarousel
SearchBar
FilterPanel
GallerySection
ContactForm
CTASection

---

16. TENANT BRANDING SUPPORT

The template MUST support dynamic association branding.

Tenant-configurable:

- logo
- colors
- banners
- typography accents
- footer content
- contact information

BUT:

The overall structural layout MUST remain consistent.

---

17. PERFORMANCE REQUIREMENTS

Frontend MUST:

- lazy load images
- optimize assets

- use skeleton loaders
- support PWA responsiveness
- maintain fast mobile performance
- avoid heavy rendering libraries

---

18. IMPLEMENTATION REQUIREMENTS

Recommended stack:

Next.js

Tailwind CSS

Framer Motion

TypeScript

Frontend should use:

- reusable components
- clean folder structure
- scalable design tokens
- responsive utility classes
- accessible markup

---

19. IMPORTANT DESIGN RESTRICTIONS

Developer MUST NOT:

- redesign layout structure
- introduce generic admin dashboard appearance
- replace cards with table-heavy layouts
- overcrowd sections
- use dark enterprise ERP styling
- introduce excessive gradients
- use bulky spacing systems
- over-modernize the UI

---

20. TEMPLATE SYSTEM ARCHITECTURE

The frontend MUST support:

Multiple selectable association templates

This requirement is mandatory.

The architecture MUST NOT hardcode a single visual template.

REQUIRED TEMPLATE ENGINE

Recommended structure:

```
/templates
  /classic-pink
  /modern-minimal
  /premium-marketplace
```

Each association should support:
template_id
theme_id
The attached reference image represents:
Template 01 — Classic Pink Mobile-First Association Layout
This template becomes the default production template.

---

21. DESIGN TOKEN SYSTEM
Frontend MUST use a scalable design-token architecture.
DO NOT hardcode colors or spacing.
Use:
CSS Variables
Tailwind Theme Tokens
Semantic Design Tokens
Examples:
--primary
--primary-foreground
--surface
--surface-muted
--card-radius
--section-spacing
--shadow-soft
This is REQUIRED because the platform supports:

- dark mode
- multi-template support
- tenant branding
- future theming

---

22. DARK MODE REQUIREMENT
Frontend MUST support future dark mode architecture.
Important:
The default production design MUST remain:
Light mode visually identical to attached reference image.
Dark mode should be implemented through:
Theme provider architecture
Requirements:

- semantic color system
- adaptive cards
- adaptive surfaces
- adaptive shadows
- adaptive typography contrast

Avoid hardcoded light-only styling.

---

23. MARKETPLACE VIEW MODES

Marketplace pages MUST support:

Mode
Grid View
List View

GRID VIEW

Must visually match attached reference image.

Use:

- compact mobile cards
- image-first layout
- lightweight metadata
- responsive stacked rendering

LIST VIEW

Marketplace optimized layout.

Structure:

Image

→ Product Info

→ Seller

→ Price

→ CTA

View mode preference should persist using:

localStorage/session

---

24. PUBLIC SEARCH & SEO ARCHITECTURE

Members and vendor pages are publicly searchable.

Frontend MUST support:

- SEO optimization
- structured metadata
- SSR/ISR rendering
- searchable filters
- public indexing
- clean URLs

Recommended:

Next.js App Router + ISR

---

25. DYNAMIC ROUTE GENERATION

Regional, branch, member, and vendor pages MUST auto-generate dynamically from backend data.
Required route structure:
/[association]
/[association]/regions/[slug]
/[association]/branches/[slug]
/[association]/members/[slug]
/[association]/vendors/[slug]
/[association]/marketplace/[slug]
Pages MUST:

- support SEO metadata
- support tenant branding
- support responsive rendering
- support public indexing

---

26. DYNAMIC MOBILE BOTTOM NAVIGATION
Frontend MUST include:
Dynamic context-aware bottom navigation
This is a CORE MOBILE REQUIREMENT.

PUBLIC VISITOR NAVIGATION
Example:
Home
Members
Marketplace
Training
Menu

LOGGED-IN MEMBER NAVIGATION
Example:
Home
Marketplace
Wallet
Notifications
Menu

VENDOR NAVIGATION
Example:
Home
Posts
Orders

Wallet
Menu

BOTTOM NAV REQUIREMENTS
Must support:

- smooth transitions
- active states
- dark mode
- tenant branding
- icon support
- responsive behavior
- sticky mobile behavior

---

27. INLINE ADS ARCHITECTURE
Ads MUST support:
Inline feed insertion only
Do NOT implement:

- popup ads
- sidebar ads
- floating ads
- fullscreen interstitials

INLINE AD BEHAVIOR
Ads should render:

- between marketplace cards
- between member cards
- within feed structures

Example:
After every 6 marketplace cards

INLINE ADS REQUIREMENTS
Must support:

- randomized insertion
- responsive rendering
- impression tracking
- click tracking
- tenant isolation
- mobile optimization

---

28. VENDOR PAGE ARCHITECTURE
Vendor pages MUST behave more like:

Mini marketplace storefronts
NOT standard member directory pages.

REQUIRED VENDOR FEATURES

Vendor pages should support:

- product grid
- marketplace posts
- featured listings
- WhatsApp CTA
- business gallery
- business information
- inline ads
- related products

Visual behavior should remain aligned with attached design language.

---

29. TRAINING PAGE ARCHITECTURE

Training pages are:
Simple listing pages
NOT full LMS systems.

TRAINING PAGE FEATURES

Include:

- course/event cards
- schedule listings
- flyer/image support
- registration CTA
- category grouping

Avoid:

- lesson systems
- student dashboards
- progress tracking
- quizzes

---

30. IMPLEMENTATION STACK

Recommended production stack:
Next.js 15
TypeScript
Tailwind CSS
shadcn/ui
Framer Motion
next-themes

TanStack Query
Frontend MUST use:

- reusable components
- scalable folder structure
- responsive utility architecture
- accessible semantic markup
- dynamic theming support

---

31. CRITICAL DESIGN PRESERVATION RULE

The MOST IMPORTANT implementation rule:
Developer MUST preserve:
The mobile layout rhythm and visual hierarchy of the attached reference image.
This includes:

- narrow spacing system
- stacked mobile sections
- compact cards
- footer structure
- pink CTA regions
- lightweight content density
- mobile-first hierarchy
- section rhythm
- page flow

This visual rhythm is the PRIMARY DESIGN IDENTITY.
Do NOT redesign it into:

- corporate SaaS landing pages
- enterprise dashboards
- startup hero-heavy layouts
- generic admin templates

The frontend should feel like:
Association Directory + Marketplace Hybrid
optimized for:

- discoverability
- browsing
- member visibility
- marketplace interaction
- mobile usage
- public accessibility

---

32. FINAL OBJECTIVE

Create a production-grade association public frontend template that:

- looks visually identical to attached reference

- preserves mobile-first structure
- maintains clean professional association branding
- supports marketplace + members + ads ecosystem
- scales for multi-tenant associations
- supports future template switching
- supports dark mode architecture
- supports dynamic route generation
- supports inline feed ads
- supports marketplace-oriented vendor pages
- uses reusable frontend architecture
- supports future MEMSYST expansion

The attached image is the PRIMARY SOURCE OF TRUTH for:

- layout
- responsiveness
- card positioning
- visual rhythm
- spacing
- hierarchy
- section behavior
- page structure
- interaction flow

The implementation should feel like:
A polished production version of the attached design.

SPECIAL NOTES & CRITICAL COMPLIANCE RULES
MUST READ — HIGH PRIORITY IMPLEMENTATION REQUIREMENTS
These rules OVERRIDE generic frontend assumptions.
Developer MUST follow these rules STRICTLY.
The attached reference image remains the PRIMARY SOURCE OF TRUTH.

---

1. HARDCORE DESIGN PRESERVATION RULE
Developer MUST preserve:
The exact mobile-first visual rhythm, layout structure, spacing hierarchy, and section flow from the attached reference image.
This includes:

- compact mobile spacing
- stacked mobile sections
- lightweight content density
- section ordering
- footer layout
- pink CTA regions

- card proportions
- image ratios
- navigation positioning
- responsive flow

DO NOT redesign the layout.
DO NOT replace with generic SaaS landing pages.
DO NOT introduce enterprise dashboard styling.
The frontend must feel like:
Association Directory + Marketplace Hybrid

---

2. HOMEPAGE REQUIREMENT

Homepage layout MUST remain visually identical to attached reference image.
The homepage structure, content positioning, card rhythm, spacing system, and responsive hierarchy MUST closely match the design reference.

HOMEPAGE DYNAMIC CONTENT

The following homepage sections MUST render dynamically from backend data:

Section
Regions
Branches

When Admin creates:

- region
- branch

The homepage should automatically render the new records.

---

3. HARDCORE CARD LISTING PAGE RULES

The following pages MUST follow identical listing architecture:

Page
Marketplace
Members
Training
Supporters

CRITICAL RULE

These pages MUST NOT contain:
Hero banners
Large page banners
Oversized marketing headers
The pages should open directly into:

Listing-first layout
matching attached reference style.

---

4. CARD GRID LAYOUT RULES
DESKTOP
Listing pages MUST display:
6 cards per row

MOBILE
Listing pages MUST display:
2 cards per row
This rule is mandatory.

---

5. FIRST ROW — PREMIUM LISTINGS ONLY
The FIRST ROW on listing pages MUST:

- display ONLY premium cards
- support both premium accounts and premium posts
- use a modern randomized carousel system

PREMIUM CAROUSEL ANIMATION RULES
Animation:
Fade-in + Slide-in
Direction:
Right → Left

DESKTOP PREMIUM CAROUSEL BEHAVIOR
Must support:

- hover pause effect
- forward/backward controls
- controls move cards by 1 step
- smooth transitions
- infinite looping

MOBILE PREMIUM CAROUSEL BEHAVIOR
Must support:

- hold-down tap pause effect
- swipe gestures
- left/right navigation
- move cards by 1 step
- smooth touch transitions

---

6. SECOND ROW — INLINE ADS ONLY
The SECOND ROW MUST display:
Ads only
No marketplace/member cards allowed in this row.

DESKTOP ADS LAYOUT
Display:
4 landscape-ratio cards

MOBILE ADS LAYOUT
Display:
1 landscape card
100% width

ADS CAROUSEL RULES
Use:
Modern randomized carousel
Animation:
Fade-in + Zoom-in

DESKTOP ADS CAROUSEL BEHAVIOR
Must support:

- hover pause effect
- forward/backward controls
- controls move ALL visible cards together
- smooth transitions

MOBILE ADS CAROUSEL BEHAVIOR
Must support:

- hold-down tap pause effect
- swipe gesture navigation
- move cards by 1 step
- smooth touch interactions

---

7. AFTER ADS — MAIN CARD LISTINGS
After the ads section:
System MUST:

- randomly mix premium and standard cards
- support infinite scrolling
- load additional cards during scroll

CARD LOAD ANIMATION
Cards loaded during scroll MUST use:
Subtle zoom-in effect

---

8. SEARCH BAR REQUIREMENTS
All listing pages MUST support global search.
Searchable fields:

Search Field
Account ID
Post ID
Name
City

---

9. SUPPORT PAGE ACCESS RULE
The Support page is:
NOT public
Authentication REQUIRED.
Frontend MUST enforce:

- route protection
- auth validation
- redirect behavior

This MUST align with backend RBAC/authentication logic.

---

10. REGIONAL CONTACTS ARCHITECTURE
Regional office/contact sections MUST render dynamically from backend data.
When Admin creates a region:
The frontend should auto-render:

- office details
- contact information
- location details

REGION/BRANCH CREATION REQUIREMENTS
Backend/frontend forms MUST support:

Field
Custom Name
Select Region
Primary Tel
Other Tel
Email

Field
Street Address
Town
City
Region (auto from selection)
Google Maps Location

GOOGLE MAPS LOCATION RULE
Location field should support:
Copy/Paste Google Maps URL or Coordinates

---

11. BACKEND ARCHITECTURE COMPLIANCE
Frontend MUST conform to backend logic.
This includes:

- tenant isolation
- dynamic region rendering
- dynamic branch rendering
- premium account logic
- premium post logic
- ads segregation
- RBAC-protected routes
- public/private visibility rules
- infinite pagination
- random listing logic
- authentication-aware rendering

---

12. IMPORTANT IMPLEMENTATION WARNING
Developer MUST NOT:

- replace carousels with static grids
- use oversized desktop-first layouts
- introduce hero banners on listing pages
- overcrowd listing cards
- reduce mobile responsiveness quality
- redesign homepage flow

The attached reference image is the PRIMARY UI BLUEPRINT.
The implementation should feel like:
A polished, production-grade evolution of the attached design.
